

LumaWave Ads Campaign Governance and Brand Safety Policy

Version 1.0 | Effective 2026-07-01 | Fictional training document

1. Purpose and scope

This policy defines approval, brand-safety, privacy, measurement, and retention rules for fictional advertising campaigns managed by LumaWave Ads. It applies to streaming audio, podcast, display, and video placements in the capstone sample corpus.

2. Campaign approval

- Standard campaigns must be reviewed within **two business days** after complete creative and targeting materials are received.
- Regulated or high-risk campaigns require legal or compliance review and may take up to **four business days**.
- A human approver must sign off before any regulated, high-risk, or AI-assisted creative is activated.

3. Prohibited and restricted content

Campaigns promoting illegal drugs, tobacco products, weapons, or deliberately misleading financial claims are prohibited.

Health, financial-services, alcohol, and political content is restricted and requires documented eligibility, targeting, and compliance review before activation.

4. Frequency and audience controls

The default cap is **four impressions per listener in a rolling seven-day window**. A higher cap requires a documented experiment and campaign-owner approval.

Sensitive personal characteristics must not be used for targeting. Audience definitions must rely on approved contextual or consented first-party signals.

Control	Default	Exception owner
Standard approval	2 business days	Campaign Operations
Regulated/high-risk approval	Up to 4 business days	Legal or Compliance
Frequency cap	4 impressions / 7 days	Campaign Owner

5. Measurement and reporting

Approved performance measures include impressions, clicks, completed listens or views, conversions, revenue, click-through rate, conversion rate, and return on ad spend. Reports must distinguish measured results from modelled estimates.

Attribution limitations, delayed events, blocked tags, and known data gaps must be disclosed alongside campaign results. Unsupported causal claims are not permitted.

6. AI-assisted work

AI tools may summarize approved campaign evidence or draft copy, but they must not invent performance claims, audiences, approvals, or source citations.

All AI-assisted copy requires human review. When evidence is insufficient, the system must request clarification or state that it cannot support an answer.

7. Data retention and privacy

Raw campaign event data is retained for **90 days**. Aggregated, non-identifying campaign reports may be retained for **13 months** for trend analysis and renewal planning.

Uploaded files must exclude passwords, authentication tokens, payment-card data, and unapproved personal information. Access should be limited to authorized campaign and measurement personnel.

8. Escalation and exceptions

Potential policy violations must be paused and escalated to Campaign Operations. Legal or Compliance decides whether restricted content may proceed. Every exception must identify its owner, rationale, scope, and expiration date.

9. Document status

This document is fabricated solely for local capstone testing. LumaWave Ads and all referenced organizations are fictional.
